DBA annotated concept views / Revision B

MODULE / TOP VIEW

Housing envelope excludes button protrusion.

DBA / REV B | NOMINAL mm | CONCEPT ONLY - NOT TO SCALE

38 x 28 mm nominal housing. The 13 mm button opening is distinct from the 12.4 mm modeled stem and 16 mm flange. Housing height is 11.5 mm; button protrusion is a further 2.2 mm.

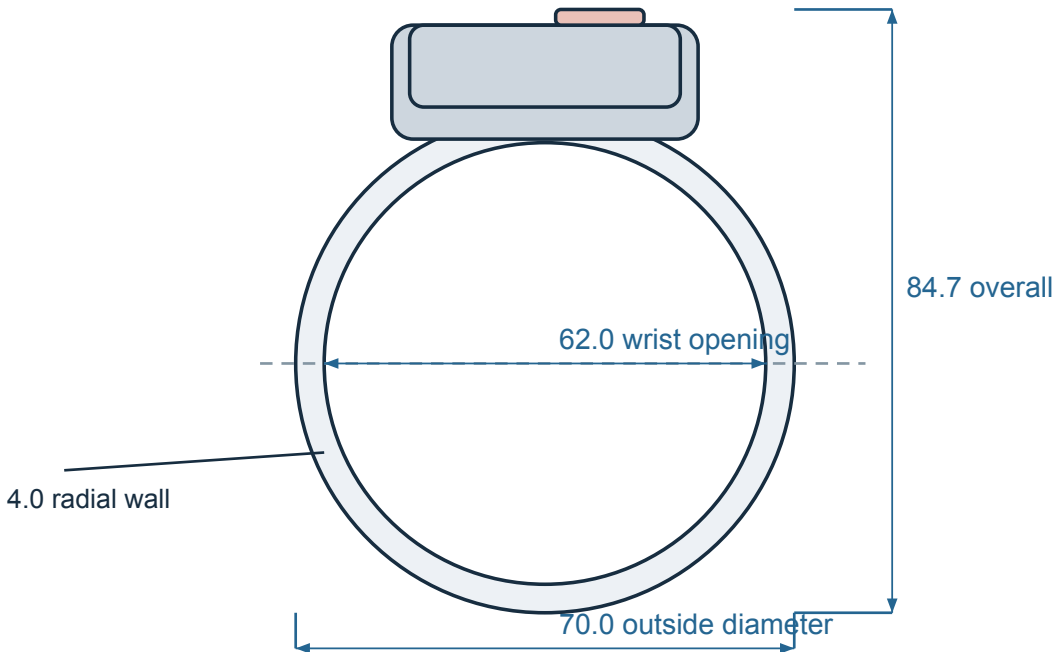

Source: original dba_cad.py and unchanged embedded geometry. Existing DBA-001 discrepancy: 88.5 mm overall versus 84.7 mm from the source. Drawings are not to scale and are not a fit or structural verification.

Band / front view

DBA annotated concept views / Revision B

BAND / FRONT VIEW

Existing source geometry, with the module assembled.
24.0 band width along wrist axis; 33.0 cradle width.

DBA / REV B | NOMINAL mm | CONCEPT ONLY - NOT TO SCALE

62 mm relaxed opening, 70 mm nominal band outside diameter, 24 mm axial band width and 4 mm radial wall. 84.7 mm overall source height includes the button. Wrist coverage and stretched fit are not demonstrated.

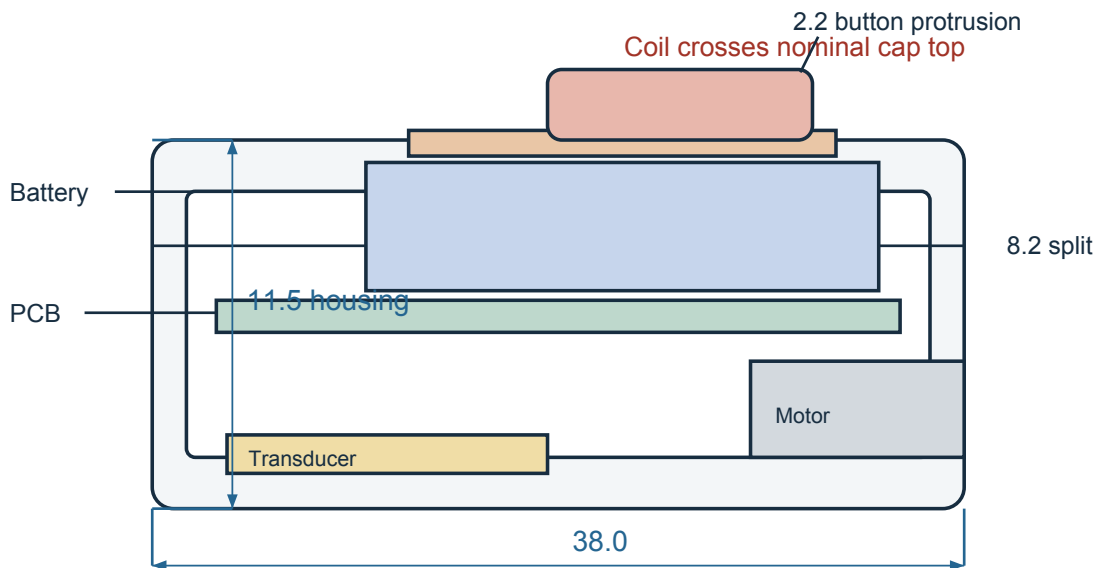

Source: original dba_cad.py and unchanged embedded geometry. Existing DBA-001 discrepancy: 88.5 mm overall versus 84.7 mm from the source. Drawings are not to scale and are not a fit or structural verification.

Module / schematic section

DBA annotated concept views / Revision B

MODULE / SCHEMATIC SECTION

Internal packaging is unresolved. This view does not certify fit.

Cap/battery overlap, coil clearance and switch/button stack require reconciliation.

DBA / REV B | NOMINAL mm | CONCEPT ONLY - NOT TO SCALE

The section exposes unresolved cap, battery and coil clearances. It is an explanatory section, not a released manufacturing drawing. No tolerances, material approval or pressure rating are assigned.

Source: original dba_cad.py and unchanged embedded geometry. Existing DBA-001 discrepancy: 88.5 mm overall versus 84.7 mm from the source. Drawings are not to scale and are not a fit or structural verification.
